***Claim Rejections - 35 USC § 112***

Claims 1 and 33-34 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The 1/28/05 amendments specify "laminar flow". Applicants state support for this amendment is found in figure 2 and paragraphs [12]-[13]. The specification and figures have been considered and there is no teaching of "laminar flow". This language should be deleted.

***Claim Rejections - 35 USC § 102***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1 and 33-34 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Vigh(USP 6,511,850) et al. or Weigl et al. (USP 6,454,945).

See the appropriate paragraph of the 7/28/04 Office action.

***Response to Arguments***

Applicant's arguments filed 1/28/05 have been fully considered but they are not persuasive.

Applicants' state the flow of a fluid through a microfluidic channel has a parabolic distribution and sheath fluid as taught by the cited prior art would not have a constant flow rate across the region. The Office has considered this assertion, but in the absence of more probative evidence maintains the position of record. Additionally, it is

not clear what different method steps are contemplated by the instant invention that define over the art .

Applicants' state Vigh discloses the resistance between the sheathed fluids is minimal such that the flow rate of the fluid is not affected by the sheathing. However, Applicants' maintain the flow of Vigh would be subject to a parabolic distribution and not have a constant flow rate. Again, in the absence of more probative evidence, the Office maintains the sheathed fluids would be flowing at the same rate because the flow rate is not affected by the sheathing.

Applicants' characterize Weigl as teaching "... fluids flowing in parallel laminar flow may have equal flow rates ...". The Office maintains this characterization fairly reads on the instant claims.

This is a RCE of applicant's earlier Application No. 09/888,727. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
